**REGIONAL WEATHER SUMMARY**

Wet westerlies continue again today, as the next Low pressure system approaches the Bellingshausen Sea from the west. A cold frontal boundary pushes over Anvers Island late this evening as the Low drives into Alexander Island well to the south, bringing yet another round of reduced visibility in snow/fog, as well as increased northwesterly winds. The worst visibility will be after midnight tonight, with gradually improving conditions expected throughout the day tomorrow as the frontal boundary pushes off to the east.

**Today**  
11 December

**Tonight**

**Tomorrow**  
12 December
