**PALMER STATION WEATHER FORECAST INFORMATION**

**THIS INFORMATION IS FOR OFFICIAL USE ONLY  
AND IS LIMITED TO ACTIVITIES SPONSORED OR RECOGNIZED  
BY THE UNITED STATES ANTARCTIC PROGRAM**

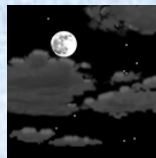

**REGIONAL WEATHER SUMMARY**

Low pressure just northwest of Anvers Island stretches to the northeast up through the central Drake Passage this morning, causing occasional light snow and breezy east-southeasterly winds into late afternoon/early evening timeframe. As the system moves off to the east, a ridge of High pressure builds over the region from the northwest, bringing much nicer weather. The next Low comes crashing into the Bellingshausen Sea region tomorrow morning, with a frontal boundary extending out ahead of it that begins affecting the Anvers Island region by early evening, with a very strong surge of northerly winds and reduced visibility in snow.

**Today**  
16 October

**Tonight**

**Tomorrow**  
17 October

**Sky:** Cloudy becoming Mostly Cloudy

**Visibility (SM):** Unrestricted, w/ periods of 3-5 due to light snow
