REGIONAL WEATHER SUMMARY

Low pressure slams into Alexander Island well to the south today, keeping a stronger wind regime and an abundance of precipitation over the region into tomorrow before things begin to slowly improve throughout the day. A ridge of High pressure briefly builds in over the area from the west-northwest tomorrow evening, but is quickly replaced by the next Low approaching from the west on Wednesday, which will bring yet another bout of precipitation and reduced visibility.

Today
21 February

Tonight

Tomorrow
22 February
