PALMER STATION WEATHER FORECAST INFORMATION

**THIS INFORMATION IS FOR OFFICIAL USE ONLY
AND IS LIMITED TO ACTIVITIES SPONSORED OR RECOGNIZED
BY THE UNITED STATES ANTARCTIC PROGRAM**

REGIONAL WEATHER SUMMARY

A broad low pressure system extending from the Bellingshausen Sea northward to Punta Arenas, as evident by satellite imagery, continues to be blocked by a high pressure ridge in the Weddell Sea. This pattern will continue to cause strong north-northeast winds for the Antarctic Peninsula through the forecast period. Indications are for precipitation ending early today as the extensive cloud cover associated with the system is forced to the south and west on Anvers Island.

Today
23 May

Tonight

Tomorrow
24 May
