## Thursday, 21 September 2023 PALMER STATION WEATHER FORECAST INFORMATION

THIS INFORMATION IS FOR OFFICIAL USE ONLY AND IS LIMITED TO ACTIVITIES SPONSORED OR RECOGNIZED BY THE UNITED STATES ANTARCTIC PROGRAM

## REGIONAL WEATHER SUMMARY

A deep and fast moving low pressure system is making its way through the Drake Passage and subsequently will provide enough onshore flow moisture in the low levels and relative instability to bring snow to Anvers Island for the next 24-30 hours. Winds will remain relatively light from the west with temperatures slightly above seasonal norms due to the maritime influence.
