**PALMER STATION WEATHER FORECAST INFORMATION**

**THIS INFORMATION IS FOR OFFICIAL USE ONLY  
AND IS LIMITED TO ACTIVITIES SPONSORED OR RECOGNIZED  
BY THE UNITED STATES ANTARCTIC PROGRAM**

Anvers Island will get a bit of a break this period from what has been a constant barrage of migratory low pressure systems bringing increased winds, precipitation and consequently reducing visibility.

Currently there is a broad low pressure system over Alexander Island but most of the energy is expected to move across the Antarctic Peninsula with little impact to the local area. Outside of a few flurries here and there today and tomorrow expect pleasant conditions with light northerly winds and clouds starting to clear out some tomorrow.
