

SURFACE ANALYSIS 26-Dec-2020 06Z

Seas (FT)

SURFACE FORECAST 27-Dec-2020 18Z

METSIT 06Z 26-Dec The low center to the west is now expected to generate two additional low centers. The first (the 976 mb low depicted in the 26/06Z image) will track southeastward today, remaining west of your track but producing rain in the area and significantly strengthening the winds and seas. The second will form in approximately the same location but move eastward, passing just south of Tierra Del Fuego and across your route (as seen in the 27/18Z chart), bringing a second bout of rain and higher winds and seas.
