METSIT 00Z

25-May
High pressure building into the south western Bellingshausen Sea, in conjunction with deepening low pressure north east of the Palmer Peninsula will bring strong SW'erly winds and seas throughout the duration of the forecast and outlook periods. Expect partly to mostly cloudy skies, with frequent, but brief, rain/snow showers. Surface visibility will be limited by blowing spray and periods of mist, occasionally reduced less than 1nm in snowshowers.

FORECASTER NOTES Winds/seas may differ from those forecast due to funneling/sheltering effects of islands.
