METSIT 00Z

26-May Synoptic situation unchanged; High pressure in the southwest Pacific / Bellingshausen Sea, in conjunction with low pressure north of the Palmer Peninsula is producing strong SW'erly winds and seas throughout the duration of the forecast and outlook periods. Expect partly to mostly cloudy skies, with frequent, but brief, rain/snow showers. Surface visibility will be limited by blowing spray and periods of mist, occasionally reduced less than 1nm in snowshowers. Winds and seas will abate rapidly in the lee of Tierra del Fuego.

**FORECASTER NOTES** Winds/seas may differ from those forecast due to funneling/sheltering effects of islands.
