

SURFACE ANALYSIS 16-May-2022 00Z

Seas (FT)

SURFACE FORECAST 17-May-2022 12Z

METSIT 00Z 16-May (Note: Additional images sent in email.) The strongest winds and waves associated with a low center heading towards the Antarctic Peninsula should remain away from your location based on current trajectories. That said, once in to deep waters a weaker low will accompany your passage southwards, keeping rain, gusty conditions and choppy seas in the vicinity throughout this period.

FORECASTER NOTES Winds may differ from those forecast due to funneling/sheltering effects of islands.
