

SURFACE ANALYSIS 20-May-2022 00Z

Seas (FT)

SURFACE FORECAST 21-May-2022 12Z

METSIT 00Z 20-May The general flow pattern continues to be north-to-south, between low pressure to the west and high to the east. Troughs propagating southward within this atmospheric flow will generate waves of precipitation and occasionally gusty winds across the southern Drake to Anvers Island and the peninsula beyond.

FORECASTER NOTES Winds may differ from those forecast due to funneling/sheltering effects of islands.
