Ref B:

**SURFACE ANALYSIS 21-Apr-2022 18Z**

Seas (FT)

**SURFACE FORECAST 23-Apr-2022 06Z**

**METSIT 18Z 21-Apr** High pressure dominates the early crossing, then a low center approaches from the southwest and your route follows a trough southward. Although much of the associated energy remains to the north, damp conditions should be expected with rain of varying intensity and fog for much of this period. Wind and waves will be relatively light for the Drake, but expected to be crossed on the 23rd.

**FORECASTER NOTES** Winds may differ from those forecast due to funneling/sheltering effects of islands.
