

SURFACE ANALYSIS 25-Apr-2022 18Z

SURFACE FORECAST 27-Apr-2022 06Z

METSIT 18Z 25-Apr Snow & fog likely today, but tapering off overnight as a high pressure ridge moves into the area (upper right image). Winds should likewise trend to light & variable. After a period of potential morning fog expect a reasonably fair day tomorrow as high pressure dominates. A low approaching from the south east could bring a downturn in conditions tomorrow evening, with snow being the first indication of its approach.

FORECASTER NOTES Winds may differ from those forecast due to funneling/sheltering effects of islands.
