

METSIT 00Z 31-Mar Little change to the outlook today as the low continues to move southward and weaken slowly. In fact, today's forecast looks slightly more favorable than from yesterday at this time, with winds and seas just a bit below previously anticipated - though still rough. One final blast of stronger winds appears to be reaching you early on the first, but from all indications (and consistent with previous forecasts) you'll be arriving in the Anvers Island vicinity just before an impressively broad area of powerful winds and waves fills the entire passage.

FORECASTER NOTES Winds may differ from those forecast due to funneling/sheltering effects of islands.
