

**SURFACE ANALYSIS 22-Jun-2023 18Z**

**SURFACE FORECAST 24-Jun-2023 06Z**

**METSIT 21Z 22-Jun** A low moves west to east in the Drake. High pressure builds in with pretty stable conditions through most of the forecast period. A short period of light snow may develop with some slight visibility reductions while in port. A low begins to approach low at the end of the period. Winds may differ from those forecast due to funneling/sheltering effects of islands. This is my final forecast unless otherwise required. Timely observations received from your ship are greatly appreciated. Next forecast will be provided upon receipt of new MOVREP.

**FORECASTER NOTES** MCMURDO STATION WINTER OPERATIONS ARE IN EFFECT. WEAX SUPPORT WILL BE DONE BY THE MCMURDO STATION WEATHER OFFICE AND ISSUED BY 2100Z. SEE CONTACT INFO BELOW.
