SURFACE FORECAST

4-Dec-2024

18Z

METSIT 06Z

3-Dec

NBP will be passing through a weak high pressure system at the beginning of the forecast period. A developing low pressure system approaches the South Island, passing directly through NBP's route. The most intense elevated waves will follow behind the frontal boundary as it sweeps past the South Island, though NBP should barely miss the highest waves associated with the system with the increased speed.

FORECASTER NOTES

Positions are estimated from latest position update and the email chain discussing attempts to avoid the worst conditions associated with the low pressure system with NBP's speed adjusted to 12kts.
