

Ref A: MOVREP 14 Dec 2024

Ref B: 13 DEC 2024 SITREP

METSIT 06Z 14-Dec A low pressure system passes south of New Zealand and pivots towards Ross Sea. A high pressure system follows closely behind it, helping maintain a tight pressure gradient near NBP's route. Some periods of elevated waves and winds are associated with the passing systems. A shift in wave direction and height will occur later in the forecast period as the low draws away from the route.
