

**METSIT 06Z 27-Mar** Pleasant conditions continue! Although, periods of light snow may pass through during short periods of time. The high pressure on the plateau, located to the NNW, continues to dominate the region and the forecast period. Winds and seas all look to remain low, and now the "warm" temperature looks to cool off.

**FORECASTER NOTES** Winds may differ from those forecast due to funneling/sheltering effects of islands and katabatic winds off glaciers.
